

Employee Mental Health Insights and Treatment Analysis Report

Project Title

“Workplace Factors Influencing Mental Health: A Data-Driven Study”

Dashboard Summary

This dashboard analyzes employee mental health conditions and treatment behavior using workplace survey data. It highlights how factors such as family history, gender, remote work, company benefits, and wellness programs influence whether employees seek treatment.

The dashboard shows that a significant number of employees have sought mental health treatment, indicating increasing awareness and the importance of workplace support systems.

Key Findings / Insights

1. High Number of Employees Seeking Treatment

Out of **1248 total employees**, **630 employees** have sought treatment. This means nearly half of employees reported mental health concerns serious enough to seek help.

2. Male Employees Dominate Dataset

The gender chart shows that **male employees represent the majority** of respondents. This suggests dataset responses are more male-dominated, which may slightly influence overall patterns.

3. Remote Workers Show Higher Treatment Count

Employees working remotely show notable treatment counts. This may indicate that remote work can contribute to stress, isolation, or work-life balance challenges.

4. Family History Impacts Treatment

Employees with a family history of mental illness show higher treatment rates. This suggests hereditary or environmental mental health risk factors.

5. Benefits & Wellness Programs Matter

Employees in organizations with mental health benefits and wellness programs show more treatment awareness. Supportive workplaces encourage employees to seek help.

Patterns

- Mental health issues are common in workplaces.
- Work interference strongly affects treatment decisions.
- Supportive company policies increase mental health awareness.
- Employees need confidential and safe environments to seek help.

Recommendations for Business / Organizations

1. Improve Mental Health Benefits

Provide counseling support, therapy coverage, and wellness resources.

2. Encourage Open Communication

Create stigma-free environments where employees can discuss mental health safely.

3. Support Remote Employees

Offer regular check-ins, flexible work policies, and stress management programs.

4. Train Managers & Supervisors

Managers should identify stress signs and guide employees to support systems.

5. Ensure Confidentiality

Employees should trust that mental health discussions remain private.

Final Story with Dashboard

This dashboard clearly tells the story that **mental health is a critical workplace issue**. Many employees seek treatment, especially when work stress interferes with productivity or when personal risk factors exist.

Organizations that provide benefits, wellness programs, and supportive cultures create healthier workplaces. The dashboard helps decision-makers understand where to focus efforts to improve employee well-being and reduce mental health risks.

Conclusion

Mental health directly impacts employee productivity and organizational success. Businesses must invest in mental wellness strategies, early support systems, and employee-friendly policies to build a healthier workforce.
